

## HPE 560FLR-SFP+ And 560SFP+ - Installed on Gen9 Server: Shared Memory Feature Option Turns To Disable After SPP 04, 2016 Update

Article Number mmr\_sf-EN\_US000007132

---

### Environment

- HPE DL380 Gen9 Server.
- HPE 560-FLR SFP+
- HPE 560SFP+
- SPP 2016.04.0

---

### Issue

- 560-FLR SFP+ and 560SFP+shared memory feature turns to disabled after Firmware upgrade using SPP 2016.04.0.
- HPE Shared Memory feature: -It Enables or disables the use of reserved memory regions to allow direct assignment of devices to guest virtual machines.
- This option can be viewed by entering following location: -
- Reboot the server and Select F9 (System Utilities)
- Select System Configuration.
- Select the appropriate network adapter.
- Select Device Level Configuration

---

### Cause

N/A

---

### Resolution

- Release of hp-firmware-nic-intel-1.11.8-1.1.x86\_64.rpm included in next SPP will not disable HPE Shared Memory feature.
